

Consistency (OWL) × Validation (SHACL)

	OWL Consistent	OWL Inconsistent
SHACL conforms	Normal Ontology consistent, data conforms to shapes	Can occur Shapes do not cover the axiom <i>e.g. disjointWith violated but shapes only check name</i>
SHACL violates	Can occur OWA: “may have a name” SHACL: “no name seen in data” <i>Two different questions</i>	Can occur Both logically inconsistent and structurally violating

Lesson: Knowing one axis does NOT imply the other.
A complete knowledge system needs both
OWL (consistency) and SHACL (validation).
