

## Three retrieval families (BOOK-DEFINED)

Text RAG

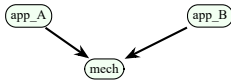

chunk1

chunk2

chunk3

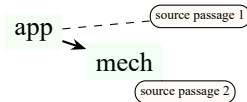

*independent passages,  
no connecting structure*

Graph (structure)

*nodes + edges + roles;  
no original prose*

Hybrid (graph-first)

*the graph drives fetching  
source passages tied to nodes/roles*

*Each family is strong in a different way — none is absolutely "more correct";  
the router (§9.71) chooses by intent.*
