

Three QA mechanisms — §9.53

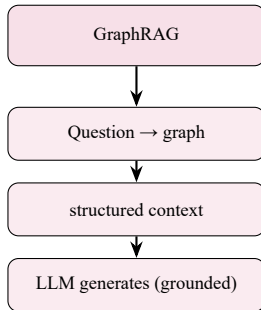

Complementary, not substitutes. See the decision table §9.53.

*exact facts → very strong;
broad questions → weak*

*open/definitional questions;
needs grounding*

*structure + evidence;
1 architecture family, not a standard*

*Precise structural question → KGQA (don't reach for RAG). Open question → Text RAG.
Need both → GraphRAG/hybrid, and every path closes an Evidence Packet.*
